

How to get into student accounts:

## Edutyping

Students can either get to their login thru our [Computer Lab Page](#): or <https://www.edutyping.com/student/login> or if you google search edutyping you can get to this point by clicking on student login.

The **Account ID** is **ccsd22**

Then they will need to click on the middle option “**Sign in with Google**”

If they are not already signed into their Google account they will need to add the [@stu.ccsdut.org](mailto:@stu.ccsdut.org) to their username email

It would be great if your 3rd-6th grader did 20-30 mins worth of lessons throughout the week.

## Coding 1st-6th grades

This year we have been working with [Code.org](#) and [SCRATCH](#)

Students use their google accounts to sign in to **Code.org**. They will choose the RED BAR that says to continue with Google. Then choose their named google account.

### Have an account already? Sign in

Want to try coding without signing in?

They can pick up where we have left off by choosing the yellow continue box or choose the next circle that isn't filled in with green.

## My Courses

OR

For [SCRATCH](#): 3rd-6th

This is again their school username, but this password is **scratch**.

Again 20-30 min a week on Coding would be great.

Have your student create an Animated Character

And some kind of a child's story using the Sprites and word coding block available on Scratch. Thank you.

### Student Assignment

Create your own animation.
